DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1 and 2 rejected under 35 U.S.C. 102(b) as being anticipated by Hayashibara et al. (4,428,719). Hayashibara et al. teach an actuating structure for a rotation apparatus, comprising: a hollow shell (21b), covered by a lid (21a) thereon; a coil (38), connected to a circuit board (39), the coil and the circuit board being installed within the shell (clearly seen in figure 3); a fan (31), installed within the shell, wherein the fan includes a hollow capping member (35a) capping a spindle (30), the spindle passing through the coil to dispose the coil within the capping member, the fan further comprising a circular permanent magnet (53) within the capping member and a plurality of blades (clearly seen in figure 3) extending radially from an exterior surface of the capping member; and the spindle being rotatably fixed between the lid and a bottom surface of the shell (clearly seen in figure 3), wherein the shell includes a round chamber therein (21e), the chamber includes a connecting seat (35) at a bottom thereof, a snapping hole (27) at a center of the connecting seat, and the lid includes a snapping hole (23a) at a center thereof, such that two ends of the spindle are pressed into the snapping holes.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- Chung (5,997,265) teaches a radiating fan with a spindle, hollow cap, magnet and coil.
- Yokozawa et al. (5,879,141) teach a fan with a spindle, hollow cap, magnet, coil and a lid.
